

BMP-265E SCARIFIER

AN ELECTRIC POWERED SCARIFIER

The Blastrac BMP-265E scarifier is powered by an electric motor and is ideal for medium and large sized applications. The BMP-265E benefits from an ergonomic design. The braking system with a steer handle will slow down the machine itself for a user friendly high performance scarifying machine. The working depth of the drum with cutting / milling tools is easily adjustable, and precise to the millimetre. It comes equipped as standard with a complete drum with cutters.

The BMP-265E scarifier is almost dust free when connected to the appropriate Blastrac dust collection system. Blastrac has designed a full range of scarifiers and cutters, which give the opportunity to process any floor and specific application.

BRAKING SYSTEM

During scarifying, the machine slows down itself. The brake force can be changed quite easily with the handle on steering.

CENTRED DOWN FORCE

The weight of the machine is centered in order to create a maximum down force on the rotating drum.

PRECISE HEIGHT ADJUSTMENT

The working depth is easily adjustable, this means no underground deterioration. Quick lifting / lowering of the milling drum mechanism.

LATERAL DRUM LOADING

The BMP-265E is especially designed so that the drum can be taken out of the machine, from the side without having to move the machine.

STANDARD DELIVERED WITH THE BMP-265E
